Pharmacy software solutions made better.

brightree® *by ResMed*

When you've got the right tools for your business, it shows in your patient care and your bottom line. Our comprehensive suite of solutions for infusion providers automates every step in your workflow- whether it be intake, pharmacy, warehouse, nursing or revenue cycle.

Home Infusion Pharmacy

Automate your workflow

At every step—from referrals and patient intake through receivables and reporting—our cloud-based software gives you everything you need for improved efficiency in all areas of your workflow.

Everything in one place

Brightree provides a single platform for all your clinical, billing and reporting needs.

Patient management. A comprehensive patient record is the foundation for data accuracy and positive patient engagement. Comprehensive Patient Intake lets you know what intakes are pending and what you need to focus on. With the Patient Hub app, patients can start conversations with you, submit images, and even receive automated reminders for things like upcoming deliveries and appointments or ineligible policies.

ePrescribe. Our robust tool securely interfaces with health systems to accept new referrals, and with SureScripts for prescription orders, renewals and change requests. The automated process reduces errors for improved patient safety and allows you to do so much more.

Order management. Brightree Pharmacy automates each stage of the process from prescription order entry through refill management. Our solution handles everything from medical supplies an injections to infusion prescriptions and TPNs. You have complete control, including the flexibility to dispense selected products as prescriptions or not.

- Customize label formats based on preference and state requirements
- Automatically refill prescription orders

Mobile delivery. With our Mobile Delivery solution, successful providers leverage Brightree's integration to efficiently manage their drivers and maximize productivity in the field while reducing DSO by 30 to 40%.

Document management. Capture, manage, share and secure faxed prescriptions, order forms, delivery tickets and all your documentation electronically within Brightree for easy accessibility.

Analytics and reporting. Get a clear picture of financial results and actionable insight into your pharmacy business with our analytics dashboards and reporting. Access a daily pharmacy log and other reports to ensure compliance and visibility to pinpoint decisions and improve profitability. And, finally, you can free up staff by scheduling daily reports to run automatically.

Inventory management. Our pharmacy solution streamlines inventory management with these features:

- Pre-populated data through our integration with First Databank
- Efficient purchasing through integrations with partners such as AmerisourceBergen and McKesson
- Lot tracking and recall reporting
- Maintenance of equipment, including infusion pumps

Revenue Cycle. Brightree Pharmacy requires minimal intervention, allowing staff to bill accurately and work more efficiently, maximizing your revenue.

- Configure rule-based pricing that match your contract agreements to ensure accurate pricing automatically from CMS, First Databank, and Medi-Span
- NCPDP Billing enables you to receive real-time responses and easily identify and edit claims that need troubleshooting
- Automatically submit electonric claims for confirmed orders and ERLs feed back into the system so you can get paid faster
- Or let us do it all for you with our Revenue Cycle Management Service and Brightree Patient Collections.

Compounding support

- Dispense infusion therapy medications and print supporting documentation, including labels and a compound record

- Dispense total parenteral nutrition (TPN) prescriptions, including the capture of macro and micro nutrients and patient additives; calculation of IBW, overfill, and osmolarity; nutritional calculations on the compounding record; and electrolyte pooling.

- Integrations with Baxter and B. Braun TPN compounders

- Substitute or use multiple package sizes for each component and fill

Clinical oversight

- Enhance patient safety with integrated clinical decision support

- View and respond to clinical alerts conveniently from within your pharmacy workflow

- Establish standard practices of care, tailor a multidisciplinary care plan to each patient's needs, and track outcomes against each plan

- Track patient lab results and weight trends in a chronological view

BT_PHARM_BRO_03_2024_V2

Compliance assurance

- Capture detailed records of all prescription activity

- Access historical compounding records

- Monitor security access to and dispensing of controlled substances

Home Infusion Nursing

We meet the needs of home infusion nurses by providing everything needed to electronically schedule appointments, capture visit notes, and streamline communication with patients.

> **Brightree's system is very comprehensive from intake and all the way to when the bill leaves your facility within one platform.**
