Collect. Analyze. Advance. Repeat.

Your data tells the full story of your business, but are you able to hear it? Many HME providers pull multiple data extracts, only to produce static reports that don't provide the insight needed to accelerate the business.

At Brightree, we offer a continuum of data and analytics services for confident, data-driven decisions. Take Data as a Service – the latest in our arsenal of solutions. We've partnered with Snowflake, an industry leading cloud-managed data warehousing solution, to provide a quick, performant and scalable solution which allows you to integrate and share your data for customized reporting and better data-driven decision making.
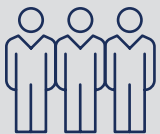

How it works

With Brightree's Data as a Service, you're able to access your Brightree data tables to perform your own analytics. But since this is a cloud-managed data solution, you don't need to build out or buy your own data server infrastructure. Additionally, with secure data sharing, no actual data is copied or transferred to multiple locations, reducing points of intrusion to your data - making your data-informed decisions more secure. This secure process provides you with near-real time data that is refreshed frequently throughout the day for the most informed decisions.

What you get

- Data on demand
- Reliable, scalable and confident enterprise-wide solution
- Fast, easy and cost-effective way to obtain and integrate data from multiple data sources

**Without Brightree DaaS, you may need these additional resources**

App Infrastructure Team
Dedicated to developing and maintaining the platform

Data Infrastructure Team
Data engineers providing data maintenance and hygiene

Business Intelligence Team
Focused on interpreting data and building visualizations

With Brightree DaaS, we take care of the infrastructure so you can focus on the insights

Brightree Data as a Service

Data as a Service adds to our arsenal of tools to address your data needs.

Architecture

Fully managed data cloud to instantly spin up and down a virtually unlimited number of concurrent workloads against the same, single copy of your data.

Secure

Dynamic data masking and end-to-end encryption for data in transit and at rest.

ITAR, SOC 2 Type 2, PCI DSS compliance, and support for HITRUST compliance.

Role-Based Access Control (RBAC)

Individual users can be granted a variety of roles – ranging from view only to full administration.

Integration

Integrates Brightree data with most common third-party data sources in your existing Snowflake instance.

Visualization

Enables out of the box connectivity to industry-leading business insight tools, such as Sisense, Tableau, ThoughtSpot, Domo and more.

Ease of Access

Multiple secure methods to connect including Secure View with and without data replication or through a reader account.

Get the full story of your data.
